

Anton Artyomov CEO, Aston Group Dear friends!

Aston Group was founded in early 1999 in the midst of a severe economic crisis. In those days, the word "crisis" itself seemed a novelty and it was hard to imagine that it would stay with us for a long time. I believe that the key to overcoming any crisis is to move ahead despite the obstacles and "adverse" circumstances. For that very reason we keep improving our expertise, expand the range of services, penetrate other countries' markets and come up with new ideas. Certainly, the healthcare industry keeps changing at a rapid pace and the evolution of society, science and technology has made the patient the central focus for all market participants. This global change has spurred introduction of patient-centered models, which are being implemented in many countries of the world. I am proud that Aston has been at the forefront of patient-centered approach in this country. For the past seventeen years we've been providing accurate data-driven information, including the real-world evidence, implementing patient support programs and offering solutions that complement and enhance the value of medical services. We help patients' voices be heard and seek to align the efforts of all industry players which in turn leads to further growth and development of the industry. Let's grow together!

Our Mission

Aston Group contributes to the development of the healthcare market by promoting collaborative interaction between the industry players and providing them with marketing and consulting services and a range of comprehensive integrated solutions.

ston consulting clinical clini

Aston Consulting (page 4):

- Strategic consulting
- Marketing research
- Pharmacoeconomic analysis (HTA)
- Patient support programs (PSP)
- PharmCompass

Aston Clinical (page 15):

- Clinical patient registries
- Epidemiological studies
- Laboratory diagnostics programs
- Clinical studies
- Registration of INN

Aston Analytics (page 21): • Aston Intelligence: BI-system Aston Technologies (page 24):

- Quinta platform and Quinta solutions
- Web-sites and educational web portals
- Expert systems

Developing the healthcare sector through better interaction of industry players

Background: 17 years of experience in healthcare market research

Professional team: over 100 office staff and 1,000 field force

Geography: offices in Moscow and Almaty (Kazakhstan)

Coverage: over 200 cities in Russia and CIS countries

Therapeutic areas: oncology, oncohematology, gastroenterology, neurology, endocrinology, orphan diseases, rheumatology, pediatrics and neonatology, cardiology, infectious diseases, pulmonology, urology and nephrology, gynecology

Proprietary databases and analytical products.

Quinta CRM system, Aston Intelligence, monitoring of regulatory changes Cross analysis using relevant information and in-depth insights

Constant development of competencies:

knowledge sharing, implementing best-in-class practices, membership in leading industry associations (ESOMAR, RAPM, ADMIT)

aston consulting

Aston Consulting utilizes diverse resources available to all other units of Aston Group to address the needs of market participants. By integrating primary data from range of sources and using high-end technology platforms AC provides a strong arsenal of value-based solutions. Throughout its entire operation, AC team representing different areas of expertise, such as marketing, HTA, biostatistics, IT, sociology and epidemiology has been offering actionable insights and analytics. The tasks that AC solves for its large client base include: development of product portfolio, launch of new products, strategy assessment and development, market access, pricing and many more. Owing to long-term productive interaction with medical and pharmaceutical community, vast experience and comprehensive regional coverage, Aston Consulting has earned a reputation as a reliable and expert partner in the Russian healthcare market

Relevant solutions throughout product life cycle

Strategic consulting

Our solutions:

- Portfolio assessment
- Product launch and sales force strategy
- Market access strategy
- Reimbursement strategy

pharmon

quinta

tenders

- Marketing strategy
- Product lifecycle management

Relevant and validated information is key to any successful market strategy.

Using own primary data, high-end technology platforms and a wide range of marketing tools Aston Group provides customers with a solid basis for strategic decision-making.

Aston Group's primary data and proprietary technology platforms

Igor Petrushin Director of Marketing Research and Consulting

- pharmcompass Monitoring healthcare regulation and policy development
 - Monitoring public pharmaceutical funding
 - Monitoring public drug procurement
 - Clinical patient registries
 - Epidemiological and screening studies
 - Primary Market Research

aston A

Assessment of sales performance in Russia as a whole and by region, including:

- Distributors
- Drug manufacturers based on data cross-analysis:

Aston Group's analytical products

and solutions

- Government funding of drug supply
- Actual volume of procurements in the public sector
- Actual prescription rates
- Pharmacoeconomic analysis

Marketing research

A wide range of own resources to conduct diverse marketing research.

- Assessment of competitive environment
 and market forecast
- Targeting and segmentation
- Identifying promotion channels
- Evaluating target audience
- Pricing studies
- · Evaluating effectiveness of promotion campaigns
- Analysis of consumer preferences
- Monitoring sales force performance
- Testing advertising concepts
- Spotting new market insights

Evgenia Ganeeva
Head of MarketAston Consulting's resources to conduct primary
market researchResearch Department• Field force covering 1200 cities in Russia

- Field force covering 1200 cities in Russia and CIS countries
- Over 800 interviewers
- On-staff moderators for focus groups
- Own focus room for on-line focus groups
- On-line research

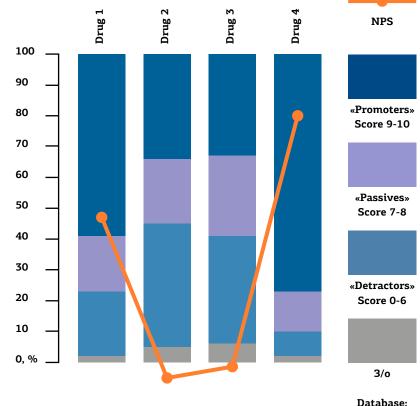

Proprietary databases:

- Physicians' database over 80 000 practitioners
- Customer panel 25 000 people

Annual coverage:

- Over 25 thousand participants of screening projects
- 55 thousand physicians and pharmacists
- Over 500 health care administrators
- Over 3063 distributors and pharmacy chains

Sample. Net promoter score

100 %

Pharmacoeconomic analysis (HTA)

Sample. Pharmacoeconomic analysis

Assessment of clinical and economic benefit of a centralized monitoring system for patients with atrial fibrillation as opposed to INR testing under routine practice

Sources of information

- Secondary data derived from systematic review and metaanalysis (MEDLINE, PUBMED, EMBASE κ Cochrane Central Register of Clinical Trials)
- Collection of primary data at the regional level

Scope of analysis

Regional

Methodology

Cost-benefit analysis, budget impact analysis

Outcome: doubled survival rate and reduced costs. Applicability of results to a broader context:

- The model can be implemented throughout the country
- · Can be used as Market Access tool at the regional level

Efficient tool to streamline allocation of healthcare resources and justify additional health costs.

- Rationale for increasing funding allocations for health interventions
- Evaluation and adjustment of standards of care
- Inclusion of new medical technologies in standards of care and treatment protocols
- Rationale for shifting budget priorities toward selected pharmaceuticals and medical devices
- Assessment of alternative medical technologies

Resources available for conducting pharmacoeconomic analysis:

- Own HTA experts (incl. those with a number of industry awards)
- Software developers (creation of electronic calculator models, including on-line models)
- Access to reliable data from clinical registries and epidemiological studies
- ISPOR membership, collaboration with leading international HTA agencies
- Collaboration with leading Russian medical research institutions

Patient support programs

aston • consulting **Standard PSP model** PSP is an effective tool to engage clinically homogenous patient groups and assist them to: Customer • improve quality of life receive better access to therapy increase compliance monitoring. control drug intake communication increase awareness about their condition on-line reports and treatment alternatives **Resources to implement PSP Aston Call Center based** Aston project Own call center (real-time communication on Quinta CRM platform manager channel for patients) Quinta Care CRM platform (efficient processing of patient information) Long-term contracts with leading laboratory networks development (nurse patronage and lab services to patients and implementation • Medical patient registration throughout Russia) and lab services · A wide network of regional and international partners • Education (geographical coverage includes Russia and CIS countries) and information service provision and feedback • Strict compliance with the Federal Law №152 'On personal Aston services data protection'; Aston Group has been accredited as personal **Field Forse** Patronage data operator by Federal Supervision Agency for Information • Legal support **Technologies and Communications** Psychological patients enrolled by physicians Discount programs **Physicians Patients**

PharmCompass — the most relevant and comprehensive information about Russian healthcare system.

Benefits of PharmCompass:

- Systemic review of available public sources, including:
 a) regulatory framework at federal and regional level
 b) key industry events arranged by regulators
 c) insights from market experts and stakeholders
- User-friendly graphical format
- Tracking and analyzing industry changes and providing practical advice

PharmCompass Russia — analytical review of Russian healthcare system

Assessment of existing trends and evolution of government healthcare policy, including:

- Legal and regulatory framework (enacted legislation and draft laws)
- Public mechanisms and principles of healthcare funding
- Public mechanisms and principles guiding provision of health services
- Current system of pharmaceutical provision
 and reimbursement

PharmCompass Russian Regions — key indicators of the regional health systems from all 85 regions of Russia

- Overview of Territorial Government Guarantees Programs for 2015 and the planning period 2016-2017 (allocation of funding on healthcare, per capita health expenditure, scope of services, sources of funding, regional health facilities, regional lists of reimbursable drugs, etc.)
- Information on regional budgets
- Total allocations on healthcare
- OMS rate agreements for 2015
- Overview of territorial programs "Healthcare Development"
- Highlight of socio-demographic indicators and epidemiological data in regional view

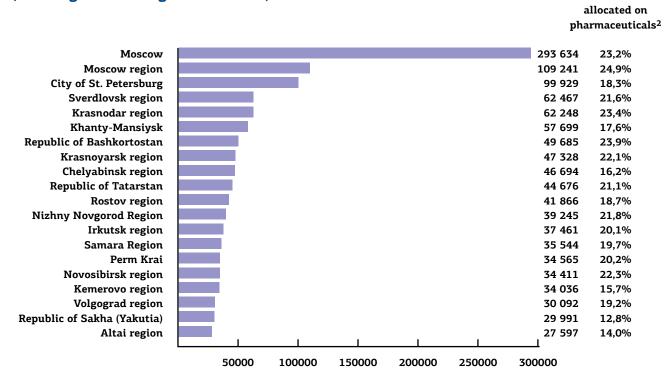

PharmCompass CIS — regularly updated analytical report on healthcare systems of CIS counties and Georgia:

- Key demographic and economic statistics
- Government regulation and funding of healthcare
- Current state and forecast for evolution local healthcare systems
- Drug supply systems: structure and funding sources
- Drug reimbursement landscape

Maria Sdvizhkova Head of Strategic Consulting Department

Sample. Top-20 Russian regions by funding of TGGP in 2015, mln. RUB (including federal budget subventions)¹

NEW! Web access to PharmCompass Regions data.

Web access through Microsoft-powered Power Bl cloud

Power BI provides additional opportunities to:

- store large amounts of structured and unstructured data
- merge external and internal corporate data
- verify data quality
- visualize data

Total %

 distribute access roles (depending on user requirements)

Power BI tools make possible:

- data mining at different levels (from federal down to regional and municipal level)
- possibility to track indicators change overtime
- cross comparison of data (funding under TPGG vs. per capita spending, the number of insured patients, the regional budgets, etc.)
- evaluating performance against competition based on the presence of INNs in the regional lists

 ¹ Resolution of the Regional Government "On the Territorial Programs of Government Guarantees of free medical services for 2015 and the planning period of 2016 -2017"
 ² Regional OMS rate agreements.

Sample. Funding of TGGP in 2015 by source and Federal District.

Aston Clinical team offers a range of solutions for challenges facing pharmaceutical manufacturers in such areas as medical research, marketing, Market Access, PR and GR. The scope of activities includes patient support programs, training programs for practitioners and multicenter clinical trials. Working in collaboration with other divisions of Aston Group, AC's efforts are continuously focused on better understanding of the market size and potential based on the data from clinical patient registries and screening programs.

Clinical patient registries

aston

Elena Koshkarova Head of Sales Department Registry data may be used in a variety of ways. Most importantly, the registries provide valuable information on actual clinical practice and help to determine the unmet needs for specialized care and high-tech medical technologies. They can also be applied for patient routing and as a rationale for shaping government drug supply policies, therefore contributing to better care and quality of life of patients. The databases that draw on information from patient registers are widely used for pharmacoeconomic analysis, comparative assessment of treatment efficacy and estimation of the need for costly drug therapies. In addition to that, clinical registries facilitate recruitment of patients for clinical trials and present a useful tool for Market Access.

Sample. Sequence of GEBD administration in patients with rheumatoid arthritis

| GEBD | Number | Average duration | Sec | quence of GI | EBD adminis | tration, nu | mber of patie | ents |

Epidemiological studies

aston

Sample. Study of type II diabetes prevalence in adult population in Russia (NATION): an example of a large-scale project to evaluate epidemiology and market potential

Y

| The study was based |
|---------------------|
| on internationally |
| accepted protocol: |

Sample 26,700 subjects represent

a micro model of the Russian population

Geographical scope:

8 Federal Districts, 63 regions, 186 settlements (88 cities, 98 rural settlements)

Structure

Epidemiological phase: HbA1c test, anthropometric measurements (height, weight, blood pressure, heart rate, etc.)

Sociological phase: collection of socio- demographic data on participants (type of residence, lifestyle habits, etc.)

Study outcomes:

Prevalence of T2DM in Russia with breakdown by region

Role of the following factors in the onset of T2DM:

- level of physical activity
- smoking and alcohol consumption

• region

• diet

of residence

Prevalence of T2DM in various ethnic groups

Estimated disease burden

Epidemiological studies provide the basis for more efficient diagnostic and treatment decisions, planning of drug supply and pharmacoeconomic evaluation.

They offer important statistics on:

- actual prevalence of disease
- patterns of disease distribution across the country
- socio-demographic and ethnic factors affecting distribution
- disease etiology (causation)
- risk factors, pathogens and trigger factors
- impact and outcomes of medical interventions (diagnostic tests, medical technologies, use of preventive care, etc.).

Aston Clinical is involved in organizing and conducting epidemiology studies of various scope and scale. They range from projects covering large population cohorts (cancer, diabetes, etc.) to small scale research where the number of patients with a particular disease is no more than a few hundred people across the country (orphan diseases).

This is achieved by having adequate resources in place: proprietary technology platform, field network, own analytical division, expertise in key therapeutic areas, as well as years of collaboration with leading laboratories and logistics providers in Russia and the CIS countries.

Laboratory diagnostics programs

Inna Pugach Head of Laboratory Diagnostics Department **Problem:** need for fee-based biochemical testing for concentration of parathyroid hormone (PTH) in patients with secondary hyperparathyroidism

Task: increase the number of patients who can be tested for PTH

Solution: program of free diagnosis for patients with secondary hyperparathyroidism

- registration and referral for testing of patients identified with this condition
- remuneration of the laboratories for diagnostic services rendered
- collection and systematization of data

Outcome: medication for treatment of secondary hyperparathyroidism was included in the updated Essential Drugs List in 2015

Project duration: September 2010 — December 2014

Geographical scope:

Moscow, Saint Petersburg, Vladivostok, Kazan, Novosibirsk +13 other cities

Participating lab networks: Vera. Invitro. SitiLab.

Helix+ 10 labs based at various clinics Laboratory diagnostics programs are implemented using Quinta Lab platform, which is an integrated on-line system for collection, processing and storage of diagnostic information. Currently, Aston Clinical has collaborative arrangements with lab networks (that meet GLP standards) throughout the country and implements projects covering a number of therapeutic areas, such as oncology, hematology, infectious diseases, and rare genetic diseases and some others. In addition to that, lab diagnostics based on Quinta Lab platform is an effective tool for clinical research and pharmacovigilance, as it allows monitoring patient's response to therapy and evaluating the efficacy and safety profiles. Quinta Lab can be employed for clinical trial and other purposes, including:

- collection and processing of data for preparation of drug registration dossier and pharmacoeconomic rationale
- collection and processing of data for pharmacovigilance (regular lab testing and monitoring patient's condition during post-registration period)
- generation of safety reports.

Innovative lab diagnostics solutions based on Quinta Lab platform contribute to early detection of disease, identification and confirmation of pathology at the molecular level, selection of effective treatment and, ultimately, improving the quality of life of patients.

Sample. Identifying target patients through lab diagnostics program

Clinical studies

Clinical studies contribute to developing innovative medicines and generics by providing evidence for their safety and efficacy.

Aston Group brings together the developers and manufacturers of pharmaceuticals and the CROs in Russia and the CIS countries. The scientific potential of our staff allows us to perform a wide range of services for clinical research in different fields of medicine.

The practical aspects of our assistance include:

- development of research documentation
- selection of clinical centers
- project management
- monitoring compliance with clinical studies regulations (ICH GCP) and the applicable laws
- logistics support
- data processing
- biostatistics

Aston Clinical: a wide range of competencies and tools for managing clinical studies

An experienced team of experts with the skills and expertise in the respective specialized field

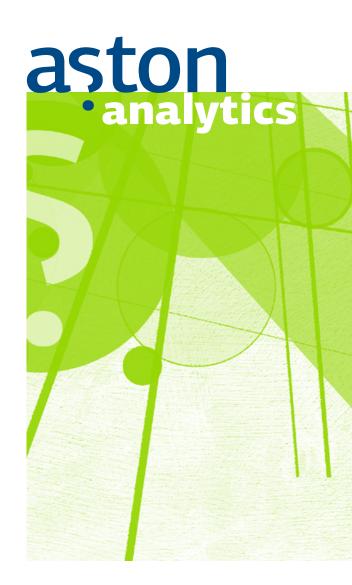

Extensive experience in clinical research and consulting

Development of scientific evidence for clinical research based on customer requirements

Use of reliable resources at all stages of research (clinical centers, leading lab networks, unified information database) The growing competition and the rising costs of resources are putting pressure on healthcare market participants to enhance planning efficiency. Today, more than ever, the industry players need relevant, comprehensive and timely information. The quality of underlying data and the depth of analysis become crucial.

Aston Analytics' solutions help get a better grasp of the current and future trends of the healthcare market nationwide.

Products and services

aston •analytics

Pharmon Census (monitoring of inpatient health facilities)

Hospital Census — a unique database of Russian hospitals with round-the-clock beds

Information on each hospital includes:

- Hospital name, address, phone number, territorial/ departmental subordination, hospital profile, name of the head physician
- Bed capacity
- Therapeutic areas
- Surgical unit (number and type of surgeries)
- The project on hospital statistics was originated in 2009.

Monitoring of the drug procurement through public tenders/auctions

Olga Savina Lead Key Account

Monitoring information from the government procurement website upon customer's request and examining supporting Manager tender documentation

Pharmon Import (database of imported drugs and pharmaceutical substances)

The data is collected using public sources (possibility of weekly tracking of particular INN)

Aston Intelligence

Unified information system based on an integrated analysis of data from various sources to optimize decision-making.

- Extended analytics
- Data visualization
- Merging with data sources
- Aggregated insights
- Storing and structuring of large amounts of data
- Accessible from any web-based device

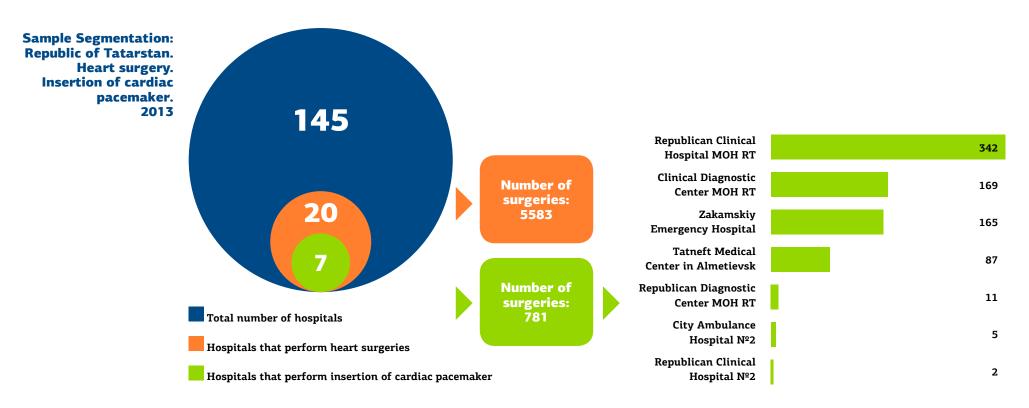

Effective tool for targeting inpatient facilities

Pharmon Census — a unique analytical product providing data on Russian inpatient facilities (updated every two years)

Pharmon Census can be used for:

- Targeting inpatient facilities
- Exploring specialized aspects (therapeutic areas)
- Integration with other sources of information, (e.g. rate agreements for delivery of health services)

Monitoring of tender procurement by medical facilities

Evaluating information from the government procurement website upon customer's request under Federal Law Nº94 and Nº44; monitoring procurement by state entities under Federal Law Nº223 using the data on announced tenders and government contracts for such items as:

- Enteral nutrition
- Medical devices

analytics

Medical equipment

Expert audit of public tenders

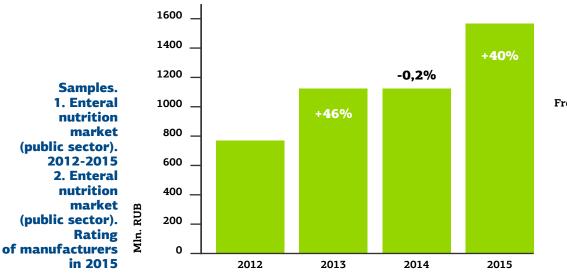

• This type of evaluation, which is based on examining supporting tender documentation helps to improve the quality

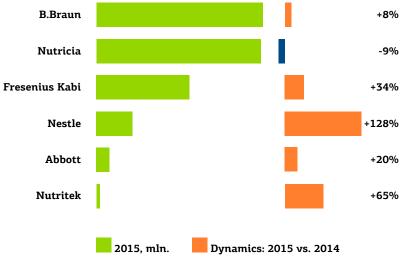

of information obtained from the official public procurement website.

- INN/TN/pharmaceutical form/quantity/price, etc.
- Drug quantity calculation in required units
- Conversion to required currency (at the rate of the Central Bank on the date of tender)
- Specific requirements for distributors in the regions

Extended analytics:

- · Market size and dynamics
- Performance of sales representatives
- · Sales volumes for specialty distributors
- Effectiveness of promotion campaign

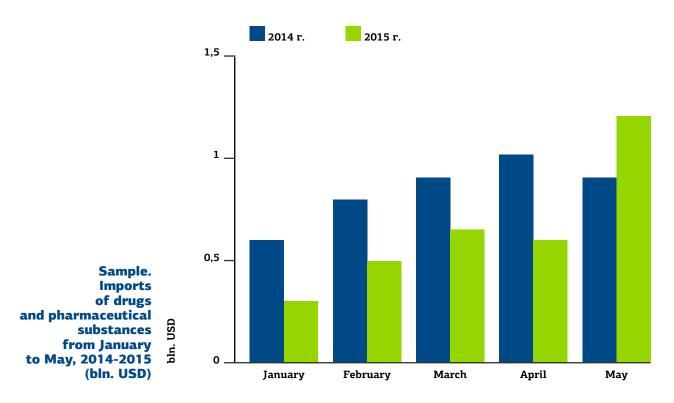

Accurate and prompt information on imported drugs and pharmaceutical substances

Data is collected using open public sources Information delivery:

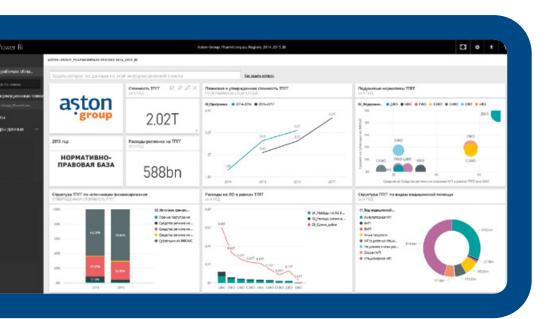

- On a monthly basis
- On a weekly basis (on-line tracking of particular INNs)

Tasks solved:

- Assessment of the volumes of imported products vs. competition (incl. information on supplier and receiving company)
- Tracking imports of new drugs
- Evaluation of market size and comparison with relevant data from other sources

Products and services

aston •analytics

Aston

Tenders (Monitoring + expert audit)

Collection of information

- from public procurement website
- Examining tender documentation

Other sources

Pharmon Import

• Tracking is done

on a weekly basis

drugs and

Pharmon Census

inpatient health

surgeries and beds

by hospital unit

Monitoring of

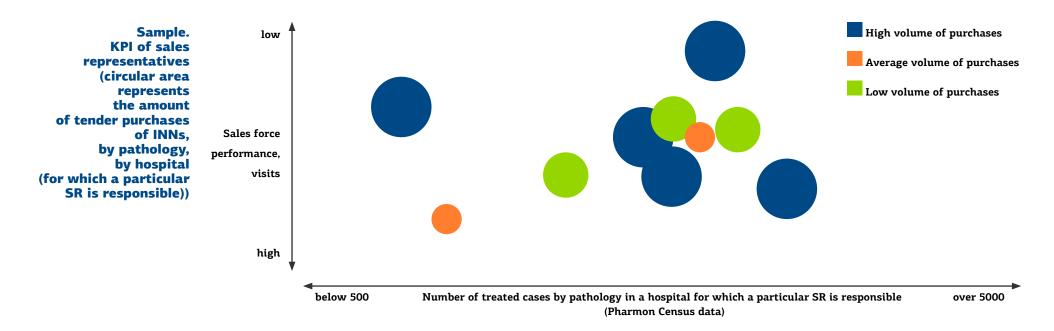

• Bed capacity

Number of

Analysis of data from different sources helps to:

- Evaluate promotion efficiency (as compared to approved portfolio strategy)
- Identify the points of growth for sales teams
- Make necessary adjustments and fine-tuning of KPIs
- Improve targeting and segmentation of regions/health facilities/target audience

Analysis of information available from different sources

Analysis of results:

- SR7 high performance in a hospital with a small number of patients ("Best Practice")
- SR4 high performance; high level of field engagement in a hospital with a large number of patients
- SR2, SR5, SR8 high performance, low level of field engagement
- SR1, SR6, SR9 moderate performance; average level of field engagement

- SR10 inadequate performance; low level of field engagement
- SR3 inadequate performance; high level of field engagement in a hospital with a large number of patients

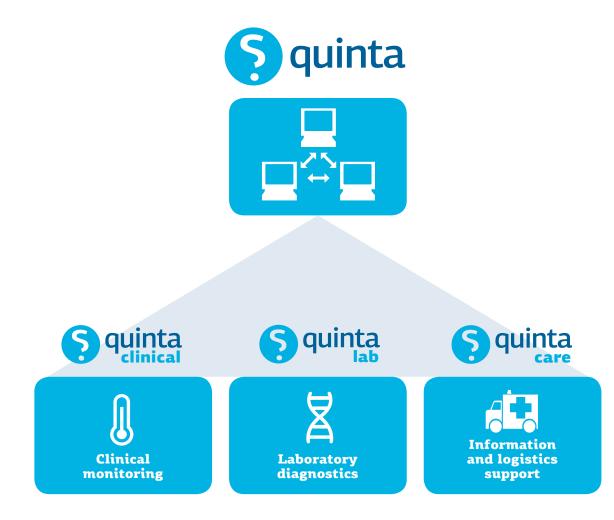

Conclusions:

- Increased frequency of visits to the facilities with a large number of treated cases should lead to an increase in the volume of tender purchases of INNs under consideration.
- SR7's performance can be considered "Best Practice"

aston technologies

IT solutions offered by Aston Technologies support effective communication between various target groups, including patients and practitioners at each point of contact (Internet, contact centers, mobile devices, social networks, etc.). The following patient needs can be met using our IT solutions:

- Increasing awareness about particular disease/therapy
- Enhancing patient knowledge and adherence
- Improving life expectancy and QoL Aston Technologies provides various tools
- for audience targeting:
- Web-sites, web-portals, tailored solutions
- Mobile apps
- Expert Systems

Quinta — a proprietary fully automated universal system build on MS Dynamics CRM platform. It is widely used for on-line management of Aston Clinical projects.

Quinta Clinical — a comprehensive solution for on-line management of clinical monitoring projects, such as patient registries, clinical and epidemiological studies, screening programs and patient routing. **Quinta Lab** — an integrated on-line database for maintaining, storing and processing patient diagnostic data (test results). All business processes are automated.

Quinta Care — a solution that provides logistics support for healthcare market participants: physicians, patients, visiting nurses, laboratories, distributors, courier service and makes possible monitoring the effectiveness of health and social programs. Quinta solutions comply with international standards and best practices and can be integrated with local and international projects.

Aston Technologies' web-solutions include development of web-portals and web-sites for patients and healthcare providers and various high-tech customized solutions, such as **Virtual Hospital**.

Sample. Web-portal for health care providers: National Registry of Patients with Diabetes Mellitus www.diaregistry.ru

- Unified information platform that brings together
- over 2,500 endocrinologists
- Opportunity to catch up on the latest research data
- Reliable source of regulatory expertise
- Training programs and distance learning
- Number of web-portal visitors: at least 300 daily.

Aston Technologies' mobile apps help optimize the patient pathway and solve a number of tasks such as: raising patient awareness, self-monitoring and checking treatment compliance. Aston Group team provides support in testing mobile apps on selected target audiences, at various stages of treatment process, and guarantees safety and confidentiality of personal data.

Aston Technologies' Expert Systems

aston technologies

> Relevant solution for clinicians to assist them in making informed decisions with respect to therapy selection based on approved standards of care, national and international clinical guidelines and best practices.

As a result of clinician's exploring and pinpointing data on disease progression and clinical manifestations, the System will automatically suggest preferred (acceptable) treatment protocols, including dosing schedule best suited for a particular patient.

Expert System capabilities include:

- Clinical recommendations based on treatment methods and procedures available at health facilities throughout Russia
- Treatment regimens based on approved clinical protocols
- Drugs are listed in accordance with marketing authorization issued by the Ministry of Health
- Drug list spreadsheet filtered by disease subtype, contraindications, drug resistance, co-morbidities and disease progression scenarios
- Drug compatibility references
- Regional aspects of drug provision

The final choice regarding treatment strategy to be used

in a particular patient is made by an attending physician.
